

## Wireless connection of ClimaCheck PA Pro

Makes it possible to move your laptop away from the noisy compressor and work within WiFi range without cables.

- WiFi Access Point, part. No. 600 350

*With the portable WiFi Access Point you can connect one or several PCs to a ClimaCheck PA Pro logger; wireless.*

### Cable replacement

The portable WiFi Access Point is well suited to replace the Ethernet cable in use with any ClimaCheck PA Pro system. Simply connect a normal Ethernet LAN cable (e.g. ClimaCheck part No. 900 205) between the Access Point and the PA Pro and it will automatically set up a dedicated wireless network for you to connect to with your PC.

The PC and PA Pro logger will then communicate as normal in a "computer to computer" network.

### Additional features

The unit has a built in rechargeable battery that allows up to 4hrs of operation and can be used as a power backup for any USB charged device such as mobile phones or tablet PC's.

It has a full size USB port, where supported 3G modems may be connected for sharing one internet connection with multiple devices, e.g. PC, PA Pro and smart phone.

It can be used in several different operation modes but as default it is configured only for use as a WiFi Access Point. Other operation modes include WiFi router, WiFi bridge (Wireless to Ethernet).

### Technical Specification WiFi Access Point

Dimensions	94 x 34 x 18 mm
Weight	60g
Supply	Built in 1800mAh battery Up to 4hrs operation
Connections	1x mini USB (supply) 1x USB (3G modem and charging output) 1x RJ45 Ethernet Ethernet, RS485, RS232
WiFi	IEEE 802.11 b/g/n
Cable	1m USB cable included
